

Automatic Drip Brew Instructions

[YOU WILL NEED]

Fresh Auto Drip Grind Coffee
Clean Coffee Brewer
Purified Water
Natural or Permanent Mesh filter for your brewer

[STEP 1]

Place filter in the brew basket on your coffee brewer.

[STEP 2]

Place 1 coffee scoop (7grams) of auto drip grind coffee for every cup of water into the filter.

Note: Measurements should be used as a starting point. Adjust according to taste.

[STEP 3]

Pour correct proportion of cold filtered water into the machine and let heat and brew until your full pot of coffee has been brewed.

Never pull and drink the coffee before it has finished because you will have an uneven pot and the flavor will be severely diminished.

[STEP 4]

Enjoy your coffee as soon as it is finished brewing.

Never let the coffee sit in a glass bowl on the burner. If you are not brewing into a thermal carafe and you want to keep the coffee hot, pour your coffee into a thermal server.

*Please use measurements and brew time as a starting point. Adjust according to taste.
Hope you enjoy your selections!*

*Sincerely yours,
Kobrick Coffee*
